

edge-sparsity L1xL2 grid: final classified fraction (1 - other_frac) vs. l1_scale/l2_scale

edge-sparsity L1xL2 grid: final testing chi² error facet (x=n_zero_edges, col=l1_scale, row=l2_scale)

testing chi² error

n_zero_edges (of 256 possible) -- col = l1_scale, row = l2_scale

edge-sparsity L1xL2 grid: final testing χ^2 error vs. l1_scale/l2_scale

edge-sparsity L1xL2 grid: final training (actual) χ^2 error facet (x=n_zero_edges, col=l1_scale, row=l2_scale)

training (actual) χ^2 error

$n_{\text{zero_edges}}$ (of 256 possible) -- col = l_1 _scale, row = l_2 _scale

edge-sparsity L1xL2 grid: final training (actual) χ^2 error vs. l1_scale/l2_scale

edge-sparsity L1xL2 grid: final phenotype composition facet (x=n_zero_edges, col=l1_scale, row=l2_scale)

final phenotype fraction

n_zero_edges (of 256 possible) -- col = l1_scale, row = l2_scale
